INVESTING IN MULTIMODAL TRANSPORTATION

Yuting Lin | NYMTC Capstone | Research Brief

PROJECT FOCUS

Explore how investments in walking, biking, and transit infrastructure can improve connections between transportation modes and support safer, more accessible, and easier everyday journeys.

TARGET AUDIENCE

Regional transit riders who rely on multiple modes to complete their journeys, particularly those making first- and last-mile connections by walking, biking, or local transit.

Key needs: Safe access · easier transfers · accessibility Reliable connections · clear transportation information

COMMUNICATION GOAL

Translate regional transportation planning and investment into something people can connect to their own travel experience.

INVESTMENT -> IMPROVEMENT -> CONNECTION -> JOURNEY

KEY RESEARCH INSIGHTS

A TRIP IS MORE THAN ONE MODE

Walking, biking, buses, rail, and other modes can function as different stages of one journey. The experience depends on how well those stages connect.

NYMTC prioritizes first/last-mile access, active transportation, transit integration, and connected infrastructure.

INVESTMENT STRENGTHENS CONNECTIONS

Crossings, sidewalks, bike facilities, accessible station approaches, and transit connections can make it easier and safer to move from one part of a trip to the next.

NYC DOT reports protected bike lanes are associated with an 18.1% reduction in total fatalities + serious injuries and 29.1% for pedestrians.

BETTER CONNECTIONS, BETTER JOURNEY

A change at one connection point can affect across to the larger transportation network, shaping safety, accessibility, reliability, and ease of travel.

Regional examples: Hicksville station/public-space improvements and secure bike parking at commuter rail stations support access to larger transit systems.

DELIVERABLE SYSTEM

MULTIMODAL JOURNEY INFOGRAPHIC

Show a commuter's complete trip + where infrastruture investments improve connections between modes.

INFRASTRUCTURE INVESTMENT FACT SHEET

Present actual NYMTC-region projects, programmed funding, and documented or expected benefits, clearly distinguishing projected outcomes from measured results.

PUBLIC OUTREACH POSTER SERIES

Communicate a simple, relatable message about how better connections improve every travel. Apply posters to stations and transit-environment mockups.

SOCIAL MEDIA POST SERIES

Adapt the campaign into conside, shareable social content that introduces the key messages, highlights project examples or journey scenarios, and extends the same visual beyond physcial transit spaces.
